Course and Examination Fact Sheet: Autumn Semester 2026

7,422: Computational Law

ECTS credits: 4

Overview examination/s

(binding regulations see below)
decentral - Written work, Digital, Individual work individual grade (30%)
Examination time: Term time
decentral - Written work, Digital, Group work group grade (40%)
Examination time: Term time
decentral - Audiovisual work, Digital, Group work group grade (30%)
Examination time: Term time

Course information

Prerequisites

There are no pre-requirements for taking this course.

Learning objectives

By the end of this course, you will be able to:

- Identify the application of technology within the legal system and analyze its transformative effects on society as a whole.
- Gain practical insights into the complexities of legal automation through active participation in either a legal hackathon or other types of collaborative group work.
- Understand the inherent challenges and risks associated with legal automation, and formulate effective, future-facing solutions to address these hurdles.

Transversal Skills: In addition to the core academic content, this course cultivates essential soft skills by encouraging peer-to-peer learning through collaboration on concrete student projects. By the end of the course, you will be able to:

- Demonstrate a capacity for critical thinking regarding the intricate interplay between law, technology, society, and the economy.
- Evaluate both your own performance and the projects of your peers, providing and receiving constructive, professional feedback.

Content

The legal landscape is undergoing a digital transformation. Law is no longer just a set of static natural language texts; it is increasingly becoming an automatically processable framework. While foundations for those processes are old, advancements

in Natural Language Processing and the readily availability of Large Language Models has altered the legal field in recent years and keep changing how we study and work. As compliance becomes more automated and AI tools permeate daily legal practice, new legal professions are emerging. In this course, we will take a deep dive into the field of Computational Law a field that connects law and technology in novel ways. This course will provide a hands-on exploration of the opportunities and risks inherent in turning law into code.

Structure and indications of the learning and teaching design

The course is setup as follows: You will receive during the break two days of input on the topic of computational law. Then you will work in groups on computational law projects (more information will be shared on Canvas and during the course). This group work can occur during the adjacent legal hackathon at the University (November 7-8) or occur outside of it. You will then showcase and discuss your project during the final day of the course and reflect on your learnings.

Literature

Tamò-Larrieux, A., Guitton, C., & Mayer, S. (2025). AI and law: how automation is changing the law. Chapman and Hall/CRC.

Examination information

Examination sub part/s

1. Examination sub part (1/3)

Examination modalities

Examination type	Written work
Responsible for organisation	decentral
Examination form	Written work
Examination mode	Digital
Time of examination	Term time
Examination execution	Asynchronous
Examination location	On Campus
Grading type	Individual work individual grade
Weighting	30%
Duration	--

Languages

Question language: English
Answer language: English

Remark

Reflection piece

Examination-aid rule

Free aids provision

Basically, students are free to choose aids. Any restrictions are defined by the faculty members in charge of the examination under supplementary aids.

Supplementary aids
--

2. Examination sub part (2/3)

Examination modalities

Examination type	Written work
Responsible for organisation	decentral
Examination form	Written work
Examination mode	Digital
Time of examination	Term time
Examination execution	Asynchronous
Examination location	On Campus
Grading type	Group work group grade
Weighting	40%
Duration	--

Languages
Question language: English
Answer language: English

Remark
Legal and technical documentation

Examination-aid rule
Free aids provision

Basically, students are free to choose aids. Any restrictions are defined by the faculty members in charge of the examination under supplementary aids.

Supplementary aids
--

3. Examination sub part (3/3)

Examination modalities

Examination type	Audiovisual work
Responsible for organisation	decentral
Examination form	Practical test
Examination mode	Digital
Time of examination	Term time
Examination execution	Asynchronous
Examination location	Off Campus
Grading type	Group work group grade
Weighting	30%
Duration	--

Languages
Question language: English
Answer language: English

Remark
Pitch video

Examination-aid rule

Free aids provision

Basically, students are free to choose aids. Any restrictions are defined by the faculty members in charge of the examination under supplementary aids.

Supplementary aids

Content

The group work can occur either at the legal hackathon organized adjacent to the course (with challenges that will be distributed over the website https://www.legalhackathons.org/), or outside of the course (to topics that relate to the content of the course and combine law and tech).

The group work consists of developing a legal tech prototype, either building on established tools that will be showcased during the course or creating something new/from scratch. The legal tech prototype should address a legal problem (e.g., a legal process, regulatory challenge, etc.) by applying technical means (e.g., pre-made tools, workflows, etc.).

Literature

The examination literature are the mandatory reading and materials discussed and linked on the slides of the course. The examination literature should be integrated within the individual reflections and can guide the group work.

Please note

Please note that only this fact sheet and the examination schedule published at the time of bidding are binding and takes precedence over other information, such as information on StudyNet (Canvas), on lecturers' websites and information in lectures etc.
Any references and links to third-party content within the fact sheet are only of a supplementary, informative nature and lie outside the area of responsibility of the University of St.Gallen.

Documents and materials are only relevant for central examinations if they are available by the end of the lecture period (CW 51) at the latest. In the case of centrally organised mid-term examinations, the documents and materials up to CW 43 (Friday, 23rd October 2026) are relevant for testing.

Binding nature of the fact sheets:

- Course information as well as examination date (organised centrally/decentrally) and form of examination: from bidding start in CW 34 (Thursday, 20th August 2026);
- Examination information (supplementary aids, examination contents, examination literature) for decentralised examinations: in CW 42 (Monday, 12th October 2026);
- Examination information (supplementary aids, examination contents, examination literature) for centrally organised mid-term examinations: in CW 43 (Friday, 23rd October 2026);
- Examination information (regulations on aids, examination contents, examination literature) for centrally organised examinations: in CW 44 (Thursday, 29th October 2026).
